# NON-STICK BAKING PAPER

Baking paper is a high quality, two side silicone treated parchment paper produced from virgin fibres without chemical additives. All raw materials used in manufacturing process comply with main food and hygienic regulations. Baking paper is environmentally friendly, biodegradable and compostable.

Baking paper available in standard or premium grade, comes in white or natural (gold) color.

Main advantages of baking paper:

- Frost and heat resistant (from  $-35^{\circ}\text{C}$  up to  $+220^{\circ}\text{C}$ );
- Excellent non-stick properties. Baking paper of premium grade impregnated with more silicone. This gives a stronger resistance for particularly oily and greasy products, or products with liquid ingredients;
- Can be used up to several times, which makes it cost effective decision. Suitable for professional use;
- Removes the need for grease in oven trays and tins, and even in frying pans;
- Reduces the need for cleaning, increases productivity and extends the lifespan of trays, eases work and saves time.
